One Block for Educational Credentials (OBEC) is an Innovation Strategic Partnership co-funded by the Erasmus+ of the European Union. It aims to explore the revolutionary possibilities that Blockchain Technology can bring to the educational field, especially in regard to issuing certifications that can be trusted and recognised across different national contexts.

Due to COVID-19 restrictions, OBEC has been kicked-off with an online meeting.

In the first phase of our project, research and analysis are being carried out in Sweden, Croatia, Italy, and Belgium.

For more information, follow our partners!

The project addresses the **obstacles imposed by differences between national educational systems** which lead to difficult and slow processes for **recognising certifications and skills**, as well as delays in migrants' integration into the labour market and their inability to practice their professions.

As such, OBEC examines the potential this could have to benefit people who move between countries, including migrants and exchange students, as well as those with alternative learning backgrounds, such as vocational education schools and life experiences like volunteering.
